PROFESSIONAL SUMMARY

AI Engineer with an Electrical Power Engineering foundation, building applied NLP, retrieval-augmented generation (RAG), and knowledge-graph systems for bilingual Arabic/English use cases. Ships production-oriented services end to end: FastAPI microservices, containerized deployment with Docker Compose, Prometheus-based observability, and automated evaluation harnesses rather than one-off notebooks.

Recent builds include a multi-service RAG and knowledge-graph platform with deterministic NL-to-Cypher translation, and a bilingual voice-based AI interviewer with speech recognition, text-to-speech, and native Arabic PDF reporting. Brings the reliability standards of power-systems engineering to AI system design: measurable evaluation, resilient service architecture, and clean deployment practices.

Core focus: applied NLP, RAG architectures, and Arabic-language AI systems — built to a standard where they can be evaluated, monitored, and deployed, not just prototyped.

KEY AI PROJECTS

Multi-Service RAG & Knowledge-Graph Platform — Python, FastAPI, Neo4j, Docker Compose, Prometheus

- Designed a three-service architecture (NER-KG, RAG, Router) with a classify → fan-out → aggregate pipeline and health-checked service dependencies.
- Built a deterministic NL-to-Cypher translation layer over a Neo4j knowledge graph, plus a GraphRAG hybrid retrieval pipeline combining symbolic and vector search.
- Implemented an automated evaluation harness scoring NER F1, Cypher-translation accuracy, and RAG grounding rate, backed by Prometheus metrics and ASGI-level observability middleware.

Adversarial NLP Evaluation & Domain-Shift Analysis — Python, PyTorch, Hugging Face Transformers

- Fine-tuned DistilBERT for sentiment classification, then built adversarial QA evaluation datasets specifically designed to expose positional bias in model predictions.
- Ran domain-shift analysis by applying the trained sentiment classifier to out-of-domain news corpora, quantifying where and why performance degraded.
- Focused on model robustness and evaluation rigor over raw accuracy — surfacing failure modes before deployment rather than after.

Hybrid Search & Re-Ranking Pipeline — Python, Weaviate, sentence-transformers

- Layered a cross-encoder re-ranking stage on top of a Weaviate hybrid (keyword + vector) search pipeline, diagnosing retrieval-quality regressions and documenting evaluation results.

More projects and code: [Portfolio](#) / [GitHub](#)

SKILLS

- AI / ML: Python, PyTorch, scikit-learn, NumPy, Pandas, RAG pipelines, LLM fine-tuning, LLM agents
- NLP: Hugging Face Transformers, spaCy, BERT, RoBERTa, sentence-transformers, embeddings
- Deployment & Observability: FastAPI, Docker, Docker Compose, Prometheus, REST APIs, Git, GitHub, CI workflows
- Databases & Knowledge Graphs: PostgreSQL, SQLite, Weaviate, Neo4j, SPARQL, ETL pipelines
- Electrical Engineering: Power distribution systems, low-voltage engineering, transformer & cable testing, SCADA
- Programming Languages: Python, C++, SQL

PROFESSIONAL EXPERIENCE

Electrical Engineer / Manager

Roya Design

Aug 2024 – June 2026
Amman, Jordan

- Manage, design, and directly supervise electrical plans across interior design and decoration projects.
- Ensure full compliance of electrical work with safety and quality standards across all active sites.

- Coordinate with architects, contractors, and site teams to deliver projects on time and to specification.

Trainee Engineer

Mar 2024 – Jul 2024

EDCO — Electricity Distribution Company

Jordan

- Implemented and supervised electrical specifications aligned with IEC/IEEE standards across Specifications, Protection, Renewable Energy, and SCADA departments.
- Analyzed electrical faults on the distribution network and developed preventive solutions.
- Conducted transformer examinations and cable-factory conformance testing.

Instructor & Course Developer

Feb 2023 – Feb 2024

Electric Youth Committee — Jordanian Engineers Association

Jordan

- Designed and delivered electronics and electrical engineering course material combining theory with hands-on practice.

APPLIED AI TRAINING

AI.SPIRE — Applied NLP & Knowledge Systems, LevelUp Economy / Istidama Consulting (Feb 2026 – July 2026). 24-week program covering ML pipelines, NLP fine-tuning, RAG, knowledge graphs, and production deployment — the foundation behind the projects above.

EDUCATION

BSc in Electrical Power Engineering

2020 – 2024

Al-Balqa Applied University — Faculty of Engineering Technology

Jordan

- Graduation Project: Photovoltaic-Thermal (PVT) System — improved solar panel efficiency by cooling panels and using excess heat for steam generation.

COURSES & CERTIFICATIONS

- Synchronous Generator Systems — Committee of Engineers in the Electricity Sector, 2024

LANGUAGES

- Arabic — Native
- English — Professional Working Proficiency
